

Setting up mPDF 6

mPDF 6 has changed significantly from earlier version and it is recommended that a fresh install is used. You may wish to copy your previous config_* files and use them to update the new config files.
config_fonts.php - values of "indic" and "unAglyphs" from previous versions are now redundant.
config_lang2fonts.php - this is similar to the previous config_cp.php file; note however that \$unifont (NOT \$unifonts) must be only one font (not a comma-separated list as before).

Included fonts - the Indic fonts e.g. ind_bn_001.ttf are no longer required (nor do they work properly with mPDF 6).

useLang - this configurable variable, which used to be true by default, is now redundant. You may need to set: \$mpdf->autoLangToFont = true; for the same results.

SetAutoFont() - is now redundant. You may need to set: \$mpdf->autoScriptToLang = true; for the same results.

Indexes - have been largely redefined. See the section above.

Lists - have been rewritten. See the section above.

Headers and Footers - have been rewritten. See the section above.

A number of old deprecated aliases will no longer be supported. Warning errors have been added to prompt you to change to the updated form:
